

Center for
Childhood Safety

.....**About Us**.....
Each year, children die from *preventable injuries* more than any other cause.

For more than 25 years, the non-profit Center for Childhood Safety (CCS) has been a “vaccine” against preventable childhood injuries. As the lead agency of Safe Kids Greater Green Bay, CCS educates families and facilitates prevention programs.

Car Seat Recommendations

Rear-Facing Car Seat

Your child should remain in a rear-facing car seat (either infant carrier or convertible) at the proper recline until they reach the top height or weight limit allowed by your car seat's manufacturer.

- Harness straps **at or below** the shoulders
- Straps snug so you can't pinch fabric to fabric above the chest clip
- Chest clip at armpit level

Forward-Facing Car Seat

Keep your child in a forward-facing car seat with a harness **and tether** until they reach the top height or weight limit allowed by the car seat.

- Harness straps **at or above** the shoulders
- Straps snug so you can't pinch fabric to fabric above the chest clip
- Chest clip at armpit level

Booster Seat

Your child must be at least 4 years old **and** 40 pounds to ride in a booster seat. A booster seat positions the seat belt so it fits properly.

- Lap belt across upper thighs, not stomach
- Shoulder belt snug across the shoulder and chest, not across the neck or face

Seat Belt

Your child should be at least 4'9" to safely use a seat belt. They should not tuck any part of the seat belt behind their body.

- Child's legs bend at the edge of the seat while sitting all the way back in the seat
- Lap belt across upper thighs, not stomach
- Shoulder belt snug across the shoulder and chest, not across the neck or face
- Children should sit in the back seat until they are at least 13 years old

Car Seat Reminders

- When installing, use **either** the lower anchors **or** the seat belt, **not both**.
- If the car seat wiggles more than 1" at the belt path, make an appointment to visit us and we'll help you out!
- Read the instruction manual. All important information about your car seat will be in this booklet- keep it in a safe place!
- Big winter coats interfere with getting the harness snug. Kids should wear nothing thicker than polar fleece when in their seat.
- Only use products that came with the car seat. It is not safe to use other harness covers or infant inserts.
- Look before you lock your car to make sure your child is not left behind.

Used & Expired Car Seats

- Avoid used seats. Secondhand seats may be damaged, have been involved in a crash, be missing pieces, or be expired.
- Car seats expire! Most have a lifespan of 6 years, so check the labels on the seat for the date of manufacture.
- Typically, car seats cannot be recycled except at a specialty event. If recycling is not possible, disassemble the seat, cut the straps, and dispose of it in a dumpster.
