Purpose of the meeting was to consider the proposal for the development of a photogrammatic base map for a Geographic Information System for the storage, preservation, retrieval, analysis and displaying for land planning for the Oneida Tribe.

Aerial photos were made of the Oneida Reservation in early April of this year. this would provide the base map of the system.

It is being recommended to have a mini-stations with 3-4 terminals. One would be in Planning with terminals in the Land Office, Title Search, Economic Development and Planning. The other would be in Environmental with terminals in Environmental, Conservation and Public Works.

Software recommended was either Prime Wild System 9 or ESRI Arc/Info. Total cost of both hardware and software ranges from Arc/Info of \$183,900 to System 9 of \$209,420.

It will take approximately two years to put all the information on the system, however, some activities will take less time. A critical path system will be followed for the implementation of the activities which outline the time frame scheduled from June 90 to June 92.
