

Adaptive Grazing and Crop Management Field Day

Saturday June 15, 2024

Join Oneida Nation and Understanding Ag for two in-field events where you will learn to use the power of observation to improve the net profitability of your operation.

The morning adaptive grazing topics will range from the basics of fencing and watering systems to implementing adaptive grazing management that should suit all levels of grazing experience.

The afternoon crops tour will focus on assessing soil function in the field and managing row crops to reduce input costs while improving soil health.

These events will show how the six principles of soil health drive the four ecosystem processes to improve soil function, which in turn helps build resiliency and improve long term net profitability for both grazing and cropping operations.

Morning Pasture Walk Location

Tsyunhehkwa Organic Farm
N6522 County Rd E, De Pere, WI
9 AM - Noon
